

Safety First

Parsippany Express Car and Limousine Service uses a GPS system which uses high speed advanced wireless technology. We employ a satellite based Global Positioning System to obtain location information about where a vehicle is. Personnel always know where each vehicle in our fleet is located and their exact location. GPS Navigation System allows us the ability to make vehicle management decisions that have influence on our customers. Our customers always come first.

The GPS System displays locations of vehicles in at different zoom levels. The dispatcher can easily zoom to the surrounding area to see which vehicles are in the area for last minute requests. The system logs all vehicle locations and events.

Our GPS system provides our office with real time fleet status and location. It can monitor the speed of traffic flow on roads and lead drivers away from traffic problems on a moment's notice.

Parsippany Express Car and Limousine Service uses state of the art web based Reservation system to dispatch vehicles 24 hours a day. Our vehicles are equipped with latest Magellan GPS Systems to assist drivers with directions. Our chauffeurs carry Black Berry Curve 8300 Smart phones for complete accessibility.
